

PRESS RELEASE – 8 July 2020

TechAnax Achieves ISO/IEC 27001:2013

TechAnax LLC, a Service Disabled Veteran Owned Small Business (SDVOSB) and leading provider of information technology services and solutions to the U.S. Federal Government, has achieved ISO/IEC 27001:2013 certification.

This certification is awarded to firms whose business processes conform to strict international standards and is the only auditable international benchmark for an Information Security Management System (ISMS). ISO/IEC 27001 specifies a management system that is intended to bring information security under management control and gives specific requirements for doing so. Organizations that meet the requirements may be certified by an accredited certification body following successful completion of an audit.

To obtain the certification, TechAnax underwent a comprehensive set of internal and external reviews to ensure its IT systems and security met the requirements of ISO/IEC 27001, which is part of our Integrated Management System that also includes ISO 9001 and ISO/IEC 20000.

Developed by the International Organization for Standardization, ISO/IEC 27001 is a globally recognized information security management system standard that requires adherence to controls governing information security policies; organization of information security; human resource security; asset management; access control; cryptography; physical and environmental security; operations security; communications security; system acquisition; development and maintenance; supplier relationships; information security incident management; information security aspects of business continuity management; and compliance.

The ISO/IEC 27001:2013 standard helps safeguard global supply chains against an ever-increasing risk of attacks. “Receiving this certification definitely recognizes the TechAnax continuing commitment to protect the integrity of our information systems and the security of the data our customers entrust to us.” said Byron Athan, TechAnax CEO. “By achieving this certification, we have demonstrated our commitment to provide our government customers, partners and employees, with industry best practices for information security, while greatly minimizing significant risks,” said Bill Lytle, Executive Vice President and CIO of TechAnax.
