

PRESS RELEASE – 21 March 2016

TechAnax Receives ISO 9001:2008 Certification **Intertek Certifies the TechAnax Quality Management System for ISO 9001:2008**

TechAnax LLC, an industry leader as a full service IT solution provider and Service Disabled Veteran Owned Small Business (SDVOSB), is pleased to announce that it has earned ISO 9001:2008 certification. TechAnax joins an elite group of companies that have achieved this prestigious certification. Less than 1% of all companies in the United States are ISO certified. In fact, when it comes to SDVOSB's, less than 1/10th of 1% are certified.

“This certification is another step demonstrating the maturation of our processes and ability to provide consistent, high-quality products to our customers and to our employees. A special thanks to Bill Lytle, co-owner, for laying the foundation for this ISO certification,” said Byron Athan, TechAnax CEO.

The comprehensive system of audits covered every aspect of Program Management of contracts that provide personnel to government agencies to deliver Information Technology Services and Solutions including but not limited to software/system integration, enterprise architecture, service desk, network operations, cloud migration and management, information security, testing, and consulting. ISO 9001:2008 specifies the basic requirements for a quality management system (QMS) that an organization must fulfill to demonstrate its ability to consistently provide products and services that enhance customer satisfaction and meet applicable statutory and regulatory requirements.

“Any company that has been through the certification process knows that achieving ISO 9001 certification is demanding and requires a strong commitment to quality from the top down,” said Bill Lytle, Executive Vice President and CIO of TechAnax. “Each individual in our organization must be committed to the pursuit of quality. By scrutinizing our enterprise at every level, we assure that our customers are receiving the highest quality of service.”

ISO 9001:2008 is a quality management system standard that was developed by the International Organization for Standardization, which is an association of governmental and nongovernmental organizations from many countries. The ISO 9001:2008 standard is utilized to certify quality management systems that focus on continuous improvement, customer satisfaction and the active involvement of both management and employees in a process based approach. The TechAnax certification was granted by Intertek, a leading quality solutions provider accredited by the ANSI-ASQ National Accreditation Board (ANAB) for certification of ISO 9001:2008 standards for Quality Management Systems.
